Artwork/Project Description

This is a project that we made for the final assignment in software engineering course done in a group. This website can be used for users who need a meeting room in Jakarta. So they can search and choose any meeting room from the cafe or restaurant that has collaborated with us and make reservations on the website. Not only for meetings but also can be used to find places to hangout

Artwork/Project Description

This is an example of an F&B sector website. this project is used to fulfill the final semester assignment given when im in Semester 2. This website is inspired by one of the restaurants that use the website to help customers order the menu from the link. When the customers have finished their order, the order will automatically input to the kitchen system. This idea can be used to make things easier between waiters and customers

Artwork/Project Description

This is a final project from my laboratory course which we make a front-end website like the "Guardian" website or like "Century" Website that is used for ordering medicines online. This website is used for ordering medicines online. so the user should register an account, and after that, they can search for the medicine that they want to order. Before making an order, the user should input their address and other personal information to make an order.
